

J T BEVANN DRYLINING SPECIALISTS LIMITED

METHOD STATEMENT

COMPANY:

LOCATION:

OPERATION: CONTROL OF DELIVERIES & HANDLING

- A point of delivery should be selected which is acceptable to the supplier and all other parties on site. It should cause minimum disruption while permitting maximum access and safe handling to the installation area.
- The loading/unloading will be carried out by either HIAB, Moffatt Mounty Forklift or by hand, as suited by location and load.
- Care should be exercised in the handling of all materials and particular consideration should be given to the following:
- When slings are used for lifting, palletised loads should be stacked on a clean and dry platform not exceeding two pallets in height.
- Manual handling operations will be done in the safest possible way to avoid injury to any persons.
- When plasterboard or similar products are manually off-loaded or stacked, they should be carried on edge, two men to a board.
- To prevent personal injury, operatives should wear suitable protective clothing and use the appropriate safety equipment.
